FACE TIME

Facial Recognition Time Attendance

FaceTime Time Attendance

Enterprise Time & Attendance for a large distributed enterprise is not simple matter. There are geographical separations of sites, complex pay roll calculations, and various regional wage administration practices.

In addition, traditional reliance on employees and supervisors to report time and attendance has resulted in many abuses such as buddy punching, clock padding and general inaccuracy of time capture. Manual time capture systems are error prone and consolidation of data from various sources is difficult and time consuming.

FaceTime is a Time & Attendance System, which uses Face recognition specifically designed to provide irrefutable personal verification. FRS FaceTime allows fast customization and integration with any payroll system existing in the market.

FRS FaceTime allows the employer to be 100% sure in his presence reports.
