FACE LOCK

Facial Recognition Access Control

FaceLock Access Control

Attacks on civil and institutional objects are becoming a potential threat in several parts of the world. The target might be a bank a company, and the attack might be motivated by money or ideological reasons, but the essential pattern is the same. Due to the increase of these types of attacks it is important that advanced scientific and technological solutions are applied to real-life applications.

FaceLock is a hands-free access control system based on facial recognition technology. FaceLock's core supports 1:1 and 1:N matching system, based on a stand- alone or networked database. It allows fast identification and smart access control for sensitive entrances where the speed and the security are vital.

FACE LOCK

Facial Recognition Access Control

Key Features

- ▶ Convenient and secure method of controlling door entry
